

Mass Media Visibility Distribution Plan

All of these points receive or have access to PR Newswire content, but how they use or display those feeds varies. For example:

- Large portals and general news sites typically publish every news release that is issued across the wire.
- Financial news, personal investment and stockbroker sites typically publish all news releases issued by publicly traded companies.
- Industry or topic-focused sites tend to publish only those news releases that are relevant to that industry or topic.
- Media and other sites use our content as source material for articles that are written by their own editors or journalists.

Y-AUTO-POST: The site automatically posts the content they receive from us. Please note that the content each site receives varies according to the site's audience, so while a site may auto-post our content, this does not mean the site receives every press release we distribute.

Y-FILTERED: The site has filters in place on their end; the site posts only content that matches their filtering criteria.

INTERNAL/EDITORIAL: The site does not publish full-text press releases on an open website; they may store our content in their internal system or database, or they use it for story ideas, background info, quotes, and/or links to prnewswire.com for context.
