**EasyOpen is the fastest way
for manual bag placing!**

EasyOpen

No contamination and easy to use

EasyOpen provides bags with an ingenious hanging system, consisting of a perforation, an indentation and special pins for bundling and hanging. First the side of the bag is loosened and the hands can be put into the bag. If hands are pushed down, the bag is placed into the holder (box, crates etc.). The rear side is loosened automatically. This procedure is up to 50% faster than the traditional procedures, for example, bags on a reel.

Niverplast has developed and manufactures various stainless steel holders. The EasyOpen stand is mobile with adjustable height and can hold two wickets of different bags, one at each side.
