

PRESS RELEASE

Liteye and Tribalco Team to Deliver AUDS Systems to U.S. Military Customers

Liteye's counter-UAS system ("AUDS") has been deployed with U.S. Forces to protect critical assets and personnel; Tribalco provides infield installation and training support.

Centennial CO, USA, January 12th, 2017 – [Liteye Systems, Inc.](http://www.liteye.com), provider of the AUDS counter unmanned defense system, and [Tribalco, LLC](http://www.tribalco.com), a global integrated technology services and solutions company, have teamed up in order to deliver multiple AUDS systems to the U.S. Military.

"Our team is very proud to become part of the effort to detect, track, identify, and defeat rogue UAVs threatening our Forces," stated Thomas Scott, President of Liteye Systems. He added, "As the legitimate use of unmanned vehicles becomes more prevalent in many industries, they become readily available for illicit use by our enemies. With the right technologies, we can provide coverage to our warfighters, while they conduct their mission of protecting against those who wish them harm."

Over the last 18 months, the AUDS system has been heavily evaluated and tested by military and government organizations. Through this process, AUDS consistently exceeded the mission requirements, simultaneously providing ground and air surveillance against possible threats.

AUDS is a second-generation system that detects, tracks, identifies, and defeats unmanned aerial systems ("UAS"). The AUDS system utilizes state-of-the-art radar, precision thermal and daylight cameras, advanced video tracking, and non-kinetic defeat capabilities. AUDS is a TRL-9 level system, and is in full production.

"Tribalco has been working with Liteye since the inception of AUDS, and through our partnership, we have worked diligently to provide certified AUDS installers and trainers to meet the immediate mission requirements of U.S. Forces," stated Zac Neumayr, Vice President, Tribalco. "As a global system integrator with extensive experience working with the U.S. Military, we understand the importance of enhancing perimeter protection to stay ahead of threats to life or property."

About Liteye Systems (www.liteye.com)

Liteye Systems, Inc. is a leader in surveillance systems for protection of critical infrastructure. Their products include radars, covert thermal cameras, tactical displays, and the new AUDS counter UAV system. All Liteye solutions feature revolutionary designs that enable a broad range of military and commercial applications. Headquartered in Centennial Colorado, the company has offices in the UK and representatives worldwide.

About Tribalco (www.tribalco.com)

Tribalco provides mission-critical IT, telecommunications, and soldier survival services and solutions to defense, civilian government, and commercial customers around the world. It is a trusted systems integrator with a global presence, providing advanced and innovative lifecycle solutions for the enterprise—from engineering and installation to operations and maintenance.
