**PayKiosks Internet Terminals Installs Wireless Networks in Three San Francisco Area Hotels.**

*Earlier this month PayKiosks installed wireless networks in three Bay Area hotels.areas of the hotels.*

/24-7PressRelease.com/ - January 12, 2005 - PayKiosks has installed wireless networks in two downtown Executive Inn hotels as well as the University Inn at Berkeley. All three hotels will now offer wireless access to their guests throughout all the guest rooms and common areas of the hotels.

"We're very excited to be making a substantial in-road into the San Francisco market. The Bay Area has always has always been at the forefront of the wireless movement and these installations will open up opportunities for our company throughout the United States", said PayKiosks Internet Terminals President Scott McInnes.

PayKiosks Internet Terminals is rapidly building their wireless footprint through an innovative distributorship program where the Wi-Fi Hotspot is maintained by a local owner operator. While PayKiosks does not overlook locations such as airports or hospitals, their focus is clearly on hotel locations. "Some of competitors will try to convince their operators that they can make a better return in a mall or caf " said McInnes. "Those types of locations are hit and miss. Our experience has taught us that hotels are where our distributors will realize the most rapid ROI." PayKiosks experience and expertise in large installations allows them to offer their investors the choice of simply covering the lobby area with a wireless signal or cost effectively extending that signal through an entire hotel property. As the size of area of wireless increases, so to does the potential for a greater financial return.

PayKiosks through the Provider Alliance is able to offer their customers access to tens of thousands of wireless users from companies such as GRIC, PCCW, iPass, FatPort, Airpath and BT Openzone.
