SmarrCopy CD/DVD Duplicators to be Powered by Seagate Barracuda Hard Drives

Utronics International, Inc., announced today that it is now incorporating the Seagate Barracuda 7200.10 hard drive into its SmarrCopy CD/DVD duplicator. Seagate Technology will become SmarrCopy's major hard drive provider in the SmarrCopy CD/DVD Duplicator line introduced by Utronics.

/24-7PressRelease/ - FREMONT, CA, April 26, 2007 - Utronics International, Inc., announced today that it is now incorporating the Seagate Barracuda 7200.10 hard drive into its SmarrCopy CD/DVD duplicator. Seagate Technology will become SmarrCopy's major hard drive provider in the SmarrCopy CD/DVD Duplicator line introduced by Utronics.

SmarrCopy is a revolutionary new CD/DVD Duplicator that enables businesses and individuals to produce multiple, high quality media copies on a flexible platform with amazingly fast speed and low cost. Utronics introduced the SmarrCopy line earlier this year with a new technology that significantly upgrades speed, ease of use, and reliability over the entire CD/DVD Duplicator product line. For high performance, proven dependability, ample capacity and amazingly quiet operation, SmarrCopy chose Seagate for its hard drive solution.

Barracuda 7200.10 is the first 3.5-inch desktop drive to use perpendicular recording (PMR) technology, delivering new levels of hard drive data density, reliability and performance and capacities of up to 750GB. PMR increases drive throughput without increasing spin speed by allowing more data bits to pass under the drive head in the same amount of time. The SmarrCopy CD/DVD duplicator will be offered with 80GB, 160GB 250GB and 500G Barracuda 7200.10 hard drives.

"The incorporation of Seagate's innovative and high quality hard drive will more than guarantee SmarrCopy's outstanding quality and performance for years to come," said Utronics president Andrew Kao at the company's headquarters in Fremont.

About SmarrCopy

SmarrCopy is the leading brand of Duplicator Systems with greater speed and buffer memory than others' products. SmarrCopy's high-performance stand-alone systems feature automatic, "on-the-fly" read speeds, write speeds and laser power adjustments that independently compensate for minor media imperfections. Accuracy and error-free copies are the result. In addition, SmarrCopy products are the ultimate in drive and media compatibility, having the ability to successfully write using a multitude of different media no matter what the format and the widest variety of disk drives.

About Utronics

Utronics continues to be the vendor of choice for consumer electronics and CD/DVD duplicators. We are an established market leader, in CD/DVD duplicators, portable DVD players, all-in-one entertainment center systems, LCD monitors, computer related products, and more. We offer the most extensive SmarrCopy CD/DVD duplicator line in the industry. Utronics can offer the latest in technology at the most competitive prices. Because Utronics controls design and manufacturing from the drawing board to the finished product, product quality is assured. Long-term relationships with our channel partners assure a reliable supply of affordable products and a total computing solution. Our worldwide technical support provides customers with technical services in a timely manner and can be accessed virtually anytime, anywhere.
