Improve Your Power Factor, Environment and Your Pocket Book

Green Choice was formed to distribute the PU-1200 which uses capacitor technology to decrease power consumption and thus carbon emissions within the residential or commercial market.

/24-7PressRelease/ - June 07, 2007 - Green Choice Distribution is joining the ranks of green companies in the world combining efforts through both their products and the One Percent For The Planet Campaign. Green Choice was formed to distribute the PU-1200 which uses capacitor technology to decrease power consumption and thus carbon emissions within the residential or commercial market. Green Choice's PU-1200 offers a simple and affordable way to reduce your energy cost by improving your power factor. Savings range from 10-25% depending on each individual's power factor. Green Choice offers a 60 day money back guarantee if you save less than 10%. This product is best for residential users with a power bill close or exceeding \$100 a month, simply because the unit will have a shorter realizable return period. Power factor is the quality of electricity that's delivered to your home. For example, a 1.0 power factor means that 100% of the electricity being delivered to your house is being used effectively. The average power factor delivered by utilities range from .6 to .8. All models increase your power factor. This increases the efficient use of your electricity and lowers your usage. Any motored device will run significantly cooler and consume less power. All other appliances including stereo equipment, TVs and computers will benefit from cleaner energy. The surge protected electricity also extends their life expectancy and prevent lights from flickering in your home do to inrush current or power surges. Power factor improvement is nothing new, in fact all utility companies do the same thing but very infrequently, while the PU-1200 guarantees you have the highest quality of power for all of your appliances. Further information and a recent University of Santa Clara Study can all be found on their website, <http://www.thegreenchoice.org>

About Green Choice Distribution LLC

Green Choices Power Save 1200 carries: UL listing, ISO 9000 resident inspector, CSA approval, Nasa tested capacitor technology, One Percent for the Planet Campaign and further accreditations.

Green Choice Distribution is dedicated to making what is thought of as 'green' as the standard for today and tomorrow. "Choices For Our Planet " is our motto and our dream for a sustainable and healthy future. Paramount to defining sustainability, is the knowledge that planet Earth is our only home. The Brundtland (UN) definition of sustainability is the most commonly noted and aims to create an all encompassing statement, first cited in 1987.

" Sustainable development is development that meets the needs of the present without compromising the needs of future generations to meet their own needs."

Green Choice Distribution will bring cutting edge technologies to our customers at the lowest possible prices, while maintaining a standard of the highest level. Our goal at GCD is to seek out both new and existing products designed with the sole purpose of minimizing our impact on the earth's environment. In the process of bringing new environmentally friendly products to market, we hope to create a culture of social change in which "green products" are not just an available option for a better and brighter tomorrow but rather a cost effective and expected standard of today.

"I believe that humankind, a precocious upstart ape, has a long way to go and a short time to get there, as a country philosopher Jerry Reed once put it. We are rather like the passengers hearing the pilot over the intercom say that the flight is running ahead of schedule, but is lost" - David W. Orr

Together we may join hands and find our way to a greener tomorrow! This is the belief and the goal of all of us at Green Choice Distribution.
