ELDERLY VETERAN MOM GETS LOST 29 MILES FROM HOME

LOST VETERAN MOM LOCATED 29 MILES FROM HOME IN 5 SECONDS USING GPS AND INTERNET

November 11, 2007 - Edgewater, Florida- GPS AnyPlace , the wholly owned subsidiary of SecuraCom GPS, LLC, an Internet based GPS vehicle location and fleet management systems company, announced today, that the system successfully located a woman who on occasion suffers from memory lapse. While the person still had the capability to safely drive a car, she has on occasion become disoriented and unable to find her way back home.

GPS AnyPlace President/CEO, Gary Ryan, received a call Sunday evening from Madeleine D., the daughter of the driver who called to report "we have just found my Mother 29 miles away from her home". Madeleine had suspected her Mother was missing and called her Brother to have him check to see if she was home. She was not and should have been. Madeleine then instructed her Brother to log into the GPS AnyPlace servers in Atlanta, Georgia via the internet and instructed him to simply enter the user name and password and hit the "track now" button. Within 5 seconds, the vehicle was located in a shopping mall. The use of Microsoft Mappoint and Google satellite maps pin pointed the position of the Mother's car, right down to the exact parking spot, where Police contacted the driver and escorted her to the Police department.

Madeleine states, "if I had not purchased this system from your company back in 2005, we would have never found her. I really believe your system saved my Mother's life!"

Affordable, accurate and consistent operation are what makes the BigBrother GSM tracking device a leader in the industry with thousands of units deployed world-wide. While the company mainly focuses on fleet users, often clients with similar situations to those of Madeleine, buy the system for peace of mind. Monitoring teen driving habits is also becoming a popular application of the product.

The BIG BROTHER GPS is a completely self contained live (real time) tracking device that enables fleet managers, concerned parents and others to simply view the real time and historical location, speed and heading of the vehicle being driven via the Internet at www.gpsfast.com. Installed in a covert manner and completely concealed within the vehicle, the unit features geographic out of area alerts, speed alerts, optional crash sensor and panic button alert notification features which immediately alert the family in the event of an emergency and more. BIG BROTHER GPS utilizes state of the art communication technology coupled with the latest Internet Linux based Server mapping platform enabling coverage virtually anywhere in the world where GSM wireless networks operate.

SECURACOM GPS, LLC dba GPS AnyPlace operates an East coast operation based in Edgewater, Florida and services small to large commercial fleet and contracting businesses world-wide with its network partner KORE Telematics and UHS Systems of Australia.

For further information contact Gary Ryan, at 313-402-0700 or email garyryan@securacomgps.com.

Please contact Gary Ryan if you would like to interview Madeleine for further information.
