Merchant e-Solutions Makes VeriFone Vx-570 Available with Proprietary Network

/24-7PressRelease/ - January 3, 2008 - Merchant e-Solutions (MeS) is pleased to announce the availability of the VeriFone Vx-570 terminal through the MeS Payment Network. The Vx-570 works with either a standard dial-up connection or an IP (Internet) connection.

The adoption of this terminal represents the latest expansion of internet-based POS solutions offered by MeS. With a powerful processor, built-in thermal printer, expanded memory, and ATM-like interface, transactions are processed quickly and easily. Plus, the terminal is PCI PED approved by Visa and MasterCard for pin-based debit transactions—ensuring compliance with the very latest security standards. Other benefits that enhance the IP connectivity option include improved IP transaction speeds and a troubleshooting 'URL' repair feature.

When used in conjunction with the MeS Payment Network, merchants can enjoy a very quick terminal-based payment solution that's PCI compliant and secure from end-to-end.

MeS Virtual Terminal & Payment Gateway

In addition to supporting the latest and most secure terminals, MeS offers other secure payment solutions, including the MeS Payment Gateway and MeS Virtual Terminal.

The MeS Payment Gateway is ideal for e-commerce businesses. It's based on a simple API that's easy on a merchant's IT resources and easy to integrate into existing order-entry products, shopping carts, and electronic retail systems. The MeS Payment Gateway supports e-commerce, mail order, business-to-business, and card present payment processing needs while enabling transactions to qualify for the lowest possible card association fees. Special features include support for recurring and installment payments without the need to store card numbers, the use of multiple business names through a single merchant account, and the automatic reversal of unsettled transactions

The MeS Virtual Terminal is designed for merchants who want to use a PC to process credit card transactions. It's a browser-based payment solution—requiring only a computer, a browser, and access to the web. The MeS Virtual Terminal is maintenance free, with all changes handled centrally by Merchant e-Solutions, so merchants never have to update payment software. Special features include support for card present and not present transactions, single and batched transactions, and recurring and installment payments.

About Merchant e-Solutions

Merchant e-Solutions is an Internet-based payment processing company that was founded in 1999 to provide better technology solutions for the card payment acquiring industry for merchants as well as banks. Merchant e-Solutions currently processes more than \$13.5 billion dollars in payments for more than 55,000 merchants. Merchant e-Solutions is headquartered in Redwood City CA, with operations in Spokane WA, and satellite offices in Minneapolis MN, and Columbus GA.
