**Betting Terminal to Integrate Texas Holdem Poker Software into Game Terminals**

*Betting Terminal Inc., a company with game terminals located across the globe, will integrate BackgammonMasters poker game software into their terminals. 100 betting terminals will be placed throughout Croatia in entertainment hotspots including coffee shops, restaurants and bars.*

**/24-7PressRelease/** - LONDON, UK, January 04, 2008 -- Betting Terminal Inc., a company with game terminals located across the globe, has announced that they will integrate BackgammonMasters poker game software into their terminals.

The launch of the new integration will take place in Croatia. 100 betting terminals will be placed throughout Croatia in entertainment hotspots including coffee shops, restaurants and bars. The integrated \$games will include multi-player [Texas Holdem Poker](#) at first and then other popular casino games which will be accessed live from the installed BackgammonMasters Game Lobby.

The CEO of Betting Terminal Inc. announced that Betting Terminal chose BackgammonMasters for this project because "BackgammonMasters known for their [Backgammon](#) community and also having the best graphics, the widest variety of games, and their platform is the most powerful and at the same time stable game software available in the industry."

BackgammonMasters is excited about the venture, which will be the first worldwide release of the Texas Holdem poker software. The BackgammonMasters spokesman was also excited to announce that once the Texas Holdem software has been successfully integrated into the terminals they will make other multi-table casino games available.

Betting Terminal Inc. terminals are based off of a remote access server. Players use prepaid cards in order to access their information and place real money bets in the system. Players can then play live against other players in private or public play mode.

From the terminal, players can open a new account or log into an account that already exists simply by swiping their credit card. There is a prepaid platform that has several payment transaction forms, just like when they play online at BackgammonMasters. In fact, playing [Poker](#) at a Betting Terminal is just like playing poker at home, but players play on terminal touch screens rather than on their computer at home.

Betting Terminal Inc. has also developed a land-based support system to offer support to terminal players. The support system will provide service to all 100 terminals. Whenever players have questions or issues they will easily be able to access Betting Terminal's support for fast and effective assistance with the terminal or software.
