Bi-Tron comes to the US.

Bi-Tron Products to enhance your vehicle resulting in greater engine power, gas savings & protection for the environment,

/24-7PressRelease/ - PALM BAY, FL, January 30, 2008 - Bi-Tron Marketing (N.E.) Ltd. owns the exclusive rights to proprietary and revolutionary "Next Generation" lubrication technology that can significantly reduce harmful automobile exhaust pollutant while increasing fuel efficiency and overall performance. By reducing friction, Bi-Tron can improve the efficiency of your vehicle's engine and drive train, allow for more complete fuel combustion, thereby releasing more energy, while reducing harmful tailpipe emissions.

Why is this important?

Carbon dioxide and other gases warm the surface of the planet naturally by trapping solar heat in the atmosphere. This is a good thing because it keeps our planet habitable. However, by burning fossil fuels such as coal, gas and oil and clearing forests we have dramatically increased the amount of carbon dioxide in the Earth's atmosphere and temperatures are rising.

The vast majority of scientists agree that global warming is real, it's already happening and that it is the result of our activities and not a natural occurrence. The evidence is overwhelming and undeniable.

Each year, the average car on the road today belches over 4 tons of exhaust pollutants into our atmosphere. The EPA estimates that cars produce 45% of all air pollution. The smog that blankets our cities today is getting worse.

CNN estimates that in "Los Angeles, children breathe a lifetime of polluted air every 2 weeks."

The UN Environment Report says, " the Asian Brown Cloud" across all of southern Asia is 3Km. thick and is responsible for hundreds of thousands of deaths a year from respiratory disease."

Bi-Tron Makes a Difference

Back in 1994, a group of Russian scientists released a technology previously held as a military secret. This product was a metal treatment that was used in Siberia because of its ability to provide lubrication in an extremely wide range of temperatures and conditions. After further research by a leading automobile industry engineer, the technology was acquired by Bi-Tron, further enhanced, and within a few short years, sales reached \$100 million. Bi-Tron products are regularly improved upon as a result of continuing research and development by leading chemists from the U.S., Canada, and England.

Today, Bi-Tron's global products are renowned for their positive environmental impact. We all now have to ask ourselves: "What are we doing to preserve the environment - for our self, our children and the children of tomorrow?"

Start making a difference today.

Bi-Tron's proprietary and revolutionary 'Next Generation' lubrication technology can significantly reduce harmful automobile exhaust pollutants while increasing fuel efficiency and overall performance.

By reducing friction, Bi-Tron can improve the efficiency of your vehicle's engine and drive train, allow more complete fuel combustion thereby releasing more energy, while reducing harmful tailpipe emissions.

With the help of the Bi-Tron's line of products, everyone is now able to start doing their own part to help clean up the environment. By using Bi-Tron Global's product line you can boost engine power while saving gas expenses.

Our exclusive line of time-tested products can:

Help improve the quality of the air we breathe.

Protect your second largest life-time purchase-your vehicle.

Reduce your vehicle's operating and maintenance expenses. Saving on weekly gas or diesel purchases is a huge plus in today's economy!

Bi-Tron products will not void any manufactory's warranties and are sold with a 100% customer satisfaction, money-back guarantee.
