**Are we unknowingly being affected by electrical pollution?**

*Russ Allen speaks out about the negative health effects electrical pollution has on living creatures*

**/24-7PressRelease/** - DEPERE, WI, January 31, 2008 - "Is electrical pollution slowly deteriorating the health of people across the country? It is a silent killer; invisible, odorless and tasteless; which makes it the perfect pollutant.

That question is in the back of the mind of Russ Allen, a Wisconsin native and author of the new book *Electrocution of America: Is Your Utility Company Out to Kill You?* Mr. Allen won a settlement against the Wisconsin Public Service Corporation over the issue of the effects of electrical pollution and its direct effect on his livestock and ultimately, the destruction of his eighty-year-old dairy business.

The electric utilities are allowed to use the earth to return the high voltage current. In a distribution line all of the current going "out" the utilities line needs to return to their substation. In fact, their documents say that the utilities expect sixty percent of the return current to flow uncontrolled over the earth.

On Mr. Allen's dairy farm eighty percent of the return high voltage current was found to be flowing uncontrolled over the earth on its way back to the substation. This current can show up anywhere, in a dairy barn, residential home or athletic practice facility.

"Living creatures; pets, farm animals and human beings; can be affected directly through anything that conducts electricity: metal, water or even flesh," says Allen. "What makes it worse is that it can be flowing through your body without you knowing it. No shock is necessary."

"Fibromyalgia is one of the most common diseases associated with electrical pollution and who knows what else it may be causing," says Allen. "There may be so many underlying diseases that have not yet been brought to the surface."

The following symptoms are a direct result of electrical pollution:

- „X Sleep dysfunction
- „X Chronic fatigue
- „X Muscle stiffness
- „X Joint pain
- „X Immune system impairment

"Showers, swimming pools and hot tubs are some of the biggest conductors of electrical pollution," says Allen, "and when football players spend a few hours a day in any of them, they are completely exposing themselves to the symptoms."

What people around the country do not realize is that this is not an epidemic only plaguing Wisconsin. Throughout the country; with the lone exception of California; courts have been flooded with electrical pollution cases.

"This type of pollution may be affecting Americans on a daily basis," says Allen. "And due to the nature of this pollutant most will never know until it is too late."

Mr. Allen is one of the heirs (second generation on) to the Allen Dairy Farm outside of Green Bay, Wisconsin, and a leader in the movement against the electrical pollution of animals.
