Los Angeles based biometric fingerprint lock store, FS Locks tackles the future in safety, convenience.

New technology permits or denies access to a home, building, or business. For home security locks, fingerprint recognition is the safest way to permit or reject access.

/24-7PressRelease/ - BEVERLY HILLS, CA, March 29, 2008 - FS Locks, a Biometric Fingerprint Lock Store, is quickly becoming a household name due to two major benefits of an installed fingerprint door lock at home...CONVENIENCE and SAFETY. Most of the Locks you'll find at their website, www.fslocks.com, are battery powered and come with low-battery indicators to alert you when it is time to change them. The most important safety advantage of fingerprint door locks is that you can easily add and remove users that require temporary admission to your home. This may include guests, servicemen, or perhaps a neighbor while you are on vacation. What does this mean you ask? This means that you will no longer have to deal with duplicating keys over and over, and no more missing keys that have been lost or stolen!

How Do Fingerprint Door Locks Work?

Biometric authentication technology evaluates physical traits for recognition purposes. The technology permits or denies access to a home, building, or business. For home security locks, fingerprint recognition is the safest way to permit or reject access. Fingerprint door locks are simple and easy to set up. Your fingerprint is scanned and saved in the unit. Your fingerprint when scanned again, will automatically compare your fingerprints with the saved print data you just stored into the system. If the prints match, you are immediately given access. To allow others to be given access, simply add their prints to the system in the same manner stated above. When you no longer require their entry, you can simply remove their print from the system. Instant Security!!!

A representative from FS Locks says that most of their locks are not just developed with locksmiths in mind, but for you, the do-it-yourselfer! For most of the locks available at www.fslocks.com, installations of the finger print door lock system of your choice can easily replace existing door knobs, handles and devices. Stainless steel backing plates placed on both sides of the door give a professional and well-designed look and style to your home or business while adding enhanced security reinforcement to the door. In most situations, the existing hole for your old lock will meet your requirements for the finger print door lock. It is essential to understand that finger print technology provides the verification, but it is the lock that provides the security. If you want the finger print unit to be installed outside, FS Locks says that the fingerprint lock you choose must be weatherproof and fitted to a good quality external solid door for maximum results. For use on outside doors that are exposed to moisture, you can use a weather guard kit, which includes a weatherproof gasket and a convenient rain cover. Fingerprint door locks systems can store many prints at one time. Generally you can store 10, 20, 30 even 50 fingerprints at one time. There are more advanced systems that allow you hold more fingerprints and let you know who has used the lock and even at what time and date.

What Are The Conveniences and Quality Features Of These Locks?

Not only will fingerprint door locks ensure that you are never locked outside your home or business again, children and handicapped people will find this new popular way of accessibility very easy to use and remember. The lock's you'll find at www.fslocks.com, include a high-resolution fingerprint scanner that ensures an elevated level of security. The door can be opened using your fingerprint, entering a code on the keypad, or by using laser cut backup keys. It's high security features make it ideal for the work place and at home. All units come with operating and easy to follow installation instructions and even drilling templates. No external power source is needed as they are powered by just 4 AA batteries. FS Locks says, with normal use, batteries usually have a life of about one year. Battery replacement is of course very easy to do.

Finger Print Door Locks are easy to install and no more difficult than installing a traditional lock. Innovatively designed to provide quick access without any keys or codes to remember, fingerprint door locks respond in less than one second... it is one of the fastest entry systems available on the market to ensure your children's safety when entering and exiting. As an

added element of option to you, this highly secure and unique fingerprint identification is the main method of entry, however, this door lock can also be opened using a personal identification number, or a high security mechanical key lock.

Where Can These Finger Print Door Locks Work?

Finger print door locks are ideal for residential homes, apartments, condominiums, offices, and storage facilities among many other uses. At home, the fingerprint door lock ensures that your door is always locked and secured. It will give you and your family that added convenience of security and above all else, peace of mind.
