Ethanol Fuel UST

The Diffusion System reduces tank turbulence and mixing of product with water in the tank. debris from entering the tank. It is a must have in any tank that uses an ethanol blend fuel.

/24-7PressRelease/ - ELIZABETH, NJ, April 06, 2008 - Universal Valve Co. of Elizabeth, NJ, has recently unveiled its newest product the Diffusion System. The Diffusion System is designed to dramatically improve the tank filling performance while adding no extra filling time.

The new diffusion system has been introduced by Universal Valve Co. to eliminate the major issue with the storage of ethanol fuel in underground storage tanks (UST). The system reduces tank turbulence and mixing of product with water inside the tank. It also improves and extends filter life and fits in any standard drop tube. The unit does not interfere with the drop rate into the tank. An additional benefit is that the diffusion system eliminates the entrance of larger debris (such as rags) from entering the tank which can create issues with the sensors and pumps. This is a must have for any tank with an ethanol blend fuel.

"It is the only product I am aware of that helps to prevent water phase separation in Ethanol based fuels," says Martin Pettesch Executive Vice President of Universal Valve. The system installs on any 4" drop tube for easy retrofitting. The system can be connected easily in just minutes. It's strong steel body and dielectric nylon fasteners make it durable and sturdy for extended use.

At Universal Valve Company, Inc., quality is an integral part of every product and service we produce. It's been that way since we began in 1932.

You see it in every one of our products for the petroleum dispensing industry, such as service station valves and fittings, manholes, environmental products and above ground tank fittings.

You see it in the ways we have adapted state-of-the-art information technology to provide you with new value added services.

For example, Universal product data is now available worldwide, 24 hours a day, through our new Web Page. It is one of the most valuable information tools in the field because the Internet functions as an instant personal resource library of product knowledge for our customers.

Plus, now you can improve your inventory control through use of the bar code we provide on our products. Every Universal product package that leaves our loading dock is labeled with UPC bar code that complies with PEI's industry standards.

As we move into the future you can depend on continuing Universal Valve leadership in product improvement and new product development. For 70years, we've been at our industry's leading edge in meeting changing customer needs. Innovation, plus a steady track record of responding to our customers, form the foundation of our 70-year quality heritage.

Behind this 70-year history of quality achievement stands the deep commitment of our people, people who know, understand and care about your needs. At Universal, customer satisfaction isn't merely a slogan... it's our heritage. It's the

goal of our every business relationship. It means Dependability. Availability. And always, Quality.
