**SATELLITE SIGNALS NEW FEATURE**

*Samplebase's free sample-synth player Satellite has a significant new feature. Satellite users may now import their own Wav, AIFF, and REX files. Up until now, only Satellite Pro customers have enjoyed this feature.*

**/24-7PressRelease/** - WESTLAKE VILLAGE, CA, April 13, 2008 — Samplebase announces a key enhancement for the free version of their downloadable sample-synth player.

Samplebase's free sample-synth player Satellite has a significant new feature. Satellite users may now import their own Wav, AIFF, and REX files. Up until now, only Satellite Pro customers have enjoyed this feature. While customers still need Satellite Pro to get more advanced sample editing functions and access to synth parameters, the new free version of Satellite lets them import their own sounds and create quick menus or loop patches, with access to all of Satellite's tempo sync, time and pitch stretching functions.

For example, Satellite Free users may load up to 16 loops at one time and, with one click, have them auto-assigned across the keyboard, either chromatically or on the white keys only.

Satellite is a VST/AU plug-in for PC and Mac systems, and it's also available as a stand-alone program. Satellite is free for all registered users of Samplebase, and comes with a free Ignition SoundBlock that features sounds from various Samplebase SoundBlocks.

Satellite Pro (149USD) greatly expands on the "free" feature set to include assignable quick-edit knob control, access to the patch section with three dedicated LFOs, 10 filter types, and 5-stage envelopes, a full-featured keymap screen with time-saving auto-mapping and advanced looping functions, and full access to the on-board effects module.

**About Samplebase**

Samplebase.com is a website dedicated to offering thousands of high quality, downloadable, pre-mapped Loops, Phrases, and Multisampled Instruments that cater to today's "wired" musician. All of the samples are vetted and approved by Samplebase's team of professionals, assuring consistently high levels of musicality and authenticity. They are programmed for Samplebase's exclusive AU/VST/Stand-alone sample-synth player Satellite. Satellite (free for all Samplebase users) and Satellite Pro run on Macs and PCs, or as plug-ins in a wide variety of host programs. The exclusive strategic partner of Samplebase is ILIO, distributing the highest quality virtual instruments, sample libraries, and creative tools for professional musicians.
