Great new online business offering SSL certificates with great savings along with other business and personal online solutions. Grand opening sale all through out the store.

www.eDomainhunter.com has a grand opening sale throughout the store. We now offer SSL certificates that can be issued within 2- 4 hours also at great savings.

/24-7PressRelease/ - April 19, 2008 - www.eDomainhunter.com , announced today that new Extended Validation (EV) SSL Certificates are available for sale and ready to install. An SSL Certificate is a digital credential that authenticates the identity of a Web site and encrypts information via Secure Sockets Layer (SSL) technology.

Created to establish online business identities, enable secure connections and promote online consumer confidence, EV SSLs set a higher standard for secure and successful online businesses. Like Turbo SSL and High Assurance SSLs offered by www.eDomainhunter.com , the new EV SSL offers industry-leading 256-bit encryption technology. A thorough, standardized verification process affords EV SSL owners an opportunity to tout completion of the most stringent vetting process for SSL encryption available today.

The EV SSL vetting process involves verifying the applying organization's identity and typically requires a letter from a representing attorney or accountant. While the new guidelines are strict, www.eDomainhunter.com EV SSL certificates can be issued within two to four hours after all required documentation is received.

When users access sites encrypted with EV SSLs using Internet Explorer 7, the first browser to distinguish EV certificates, the site's secure status is immediately evident. The browser's address bar reflects a green background and the name of the organization to which the certificate was issued, along with the familiar https:// prefix and padlock icon. Other browsers currently handle EV SSLs like normal certificates and are expected to distinguish them soon.

Dan Sullivan company president says "www.eDomainhunter.com not only sells SSI Certificates we use them on our website to keep our customers information safe."

For more information about the new EV SSL Certificates, visit www.eDomainhunter.com
