Granite Shield - Eco Friendly and Helps the Environment

Granite Shield helps in reducing plastic containers in landfills

/24-7PressRelease/ - CANYON LAKE, CA, April 27, 2008 - Homeowners want now is an easy to clean, low maintenance, green environmentally friendly home. With Granite Shield's sealing process you will never have to seal your granite again. With Granite Shield's sealing process only 3 oz. of each chemical used in the process is required for an average sized granite countertop (60 sq. ft.) The application only takes approximately 1 to 2 hours and it's ready to use immediately. It can be applied to new granite from the fabricator or to existing granite countertops. The Granite Shield process cleans and lifts dirt out of the pores while being applied and chemically polishes your granite leaving it cleaner, smoother, shinier, maintenance free and harsh chemical free for the life of your stone. Even the best polished piece of granite will be smoother and shinier once Granite Shield is applied.

With Granite Shield it's Eco-Friendly and they have Eco-Friendly water based aftercare products to help protect the environment. With granite sealed by Granite Shield you can still use Windex or Clorox wipes with a microfiber towel to clean your glossy granite if that's preferred and you don't have to worry about wiping up spills immediately like you have to do with other presealed granite countertops. With other well known sealers they are temporary and depending what you use to clean your granite may only last weeks, usually 6 to 12 months at the longest. You will need to continuously reseal your countertops to protect them from water, liquids and oils. Yes if water is absorbed into your granite repeatedly it can darken and remain dark from the minerals and contaminates in the water. If granite darkens from water or liquid in a short period of time means it will stain and also absorbs germs and bacteria. Unsealed granite or over the counter sealers after continuous use your granite can even darken on the edges or areas you touch granite from the natural oils from your skin leaving your granite different colors in places. Even a granite such as Baltic Brown this can happen. For example if you continuously touch parts of the edge of the countertop or continuously have your arms in the exact place on the top of the countertop it could remain darker in those places because it's absorbing the oils from your skin. Not with Granite Shield.

With the Granite Shield sealing process for granite using very little chemical and never having to seal again will save you time, money and help protect the environment by not having to continuously throw away plastic bottle after plastic bottle away in the trash ending up in many cases landfills. With flooring being sealed by Granite Shield the floor has a 10 year warranty and won't need to be resealed for at least 10 years saving you time and money from having to reseal your flooring like with most standard over the counter sealers would be about once a year. If you use Granite Shield's Kleen N Seal Rejuvenate cleaner you may never have to seal your grout or flooring once it is sealed by Granite Shield.

In the long run using Granite Shield it will save you hundreds to thousands of dollars, time and help protect the environment verses using a standard over the counter sealer, wasted time and money continuously having to reseal plus adding to landfills for the life of your stone. To view video demonstrations of the sealing process visit their website at www.GraniteShield.com

Granite Shield is located in 45 states and in Canada, Australia, New Zealand, England and Ireland with 63 authorized applicators. 26 are authorized Granite Shield Countertop store fabricators. There are currently 6 Granite Shield Countertop retail showrooms located in Lake Elsinore California, Hemet California, Temecula California, Tucson Arizona, Reno Nevada, Las Vegas Nevada and opening soon in Mission Viejo California.
