**Elite Tone LLC releases world's most versital fuzz face! 4 Fuzzes in 1 box! - VIDEO DEMO now available- click 'visit website' to take it for a test spin!**

*With a myriad of fuzz face clones drowning the market, few companies have stepped up to the plate and brought something new to the market. Just read the YAFF (yet another fuzz face) article, it says it all. Its time for a new product.*

Elite Tone has answered the call and spent tons of research and development dollars and time to bring to you the FUZZ MONSTER. The Fuzz Monster is fully loaded pedal with 4 fuzz pedals in 1 box and 11 total tonal combinations. The first challenge is packing the pedal with the complete Fuzz Face family tree, with tons of features and vintage parts for the authentic experience and some fresh custom tones, unapproached before. It starts with the first stage of the circuit with vintage germanium transistors and four control knobs fuzz, volume, contour and front mount bias knob. Then theirs a footswitch enabled jimi hendrix modification button, dialing in the mod that was not commercial available back Jimi's time that his tech rewired into his fuzz face on the first two albums. We've got the "Are You Experienced" album tone nailed. As in this stage of the circuit you have a flip switch enabled hybrid mode that adds a silicon transistor to the second transistor, adding gain, grit and sustain. Now we move on to the second stage, another footswitch this time enabling the silicon mode with that early 1970's sound. Also its important to note that you can double them together or use them individually. In addition the silicon stage includes a separate 2 knob dial setting for its own volume and fuzz. I personally like using one stage as a preset with higher volume settings to stomp on during a solo. Currently this and the 3 tube screamer pedals in 1 box are being market tested on ebay be sure to check out the link. Act now and save \$105 on th low introductory price.

We want to give the people what they want not what hype and a company tell you to like. Power to the musicians!
