**RSS Bags Cooling Projects at Climate Control Exhibition**

*Rental Solutions & Services LLC (RSS), a global provider of temporary power and cooling services bags multiple projects during the Climate Control Exhibition at Hyatt Regency, Dubai, United Arab Emirates.*

**/24-7PressRelease/** - DUBAI, UAE, May 06, 2008 - The Climate Control Exhibition organised by CPI was attended by various companies within the HVAC industry as well as multi-national companies around the world. The three day event has opened doors for RSS to lead several temporary cooling projects across Africa, South Asia and Middle East region. A number of confirmed projects were closed in the Gulf, particularly Saudi Arabia, Qatar, Bahrain, Kuwait, Oman and U.A.E.

Milan Balac, Managing Director of Rental Solutions and Services mentioned that "RSS management team would like to thank all the guests who visited our stand during the exhibition especially the companies from district cooling, manufacturing, construction, facilities, utilities, oil & gas, consultancy and master land developers who have trusted RSS for all their future projects. RSS were able to secure several temporary cooling and rental power projects within the three day event. As a result, we are expanding our chillers and generators fleet to cope up with the demand. This expansion is a great opportunity for RSS to prove that it can respond quickly not only in its products & services but also in its overall business." Balac also cited that RSS will expand in its business operations in Australia, China, Japan, Indonesia, Malaysia, New Zealand, Philippines, Singapore, Thailand and Vietnam within a couple of months. "Further to our expansion in the Middle East, Africa and India sub-continent, we are also confident that we can serve the market in Asia and Pacific by the first quarter of 2009."

Lee Cox, the General Manager for U.A.E. says that "the past and recent projects of RSS are a testament of quality work in rental power and cooling. During the three day exhibition, we were able to discuss several case studies to our guests and explain them of doing the right things, right the first time. Because of our wide knowledge and years of experience in rental cooling, we have secured multiple projects on the spot during the three day event. We listen, understand the problem and recommend the cost effective solutions to our customers. Guests were amazed of our projects and how simple our ordering system compared to other companies. Our flexibility enables us to respond swiftly and on time."

Colin Cave, the General Manager for Northern Gulf cited that "the lack of reliable provider in temporary cooling in GCC, South Asia and Africa prompted customers to look for better company who can provide personalised service and highly qualified technical support engineers. RSS response to these demands is to offer reliable and efficient equipment that will save the customers' money. Furthermore, RSS offers qualified engineers who really understand the needs of customers and flexible ordering system that will conform to the urgent requirements of each customer. What ever the environment condition, wherever the location and whenever they need our products, we can respond immediately."

**ABOUT RSS**

Rental Solutions & Services LLC (RSS) is a global provider of temporary power and cooling solutions, offering reliable equipment, flexible services and highly qualified engineers, available 24 hours / 365 days a year. Our sales and application teams work closely with our customers to ensure we deliver the most cost effective solution.

RSS strive to build long lasting mutually beneficial relationships by providing value added solutions.

RSS Temporary Cooling Solutions: includes high efficiency air-cooled chillers; water-cooled modules, cooling towers and integral VFD pumps; wide range of fluid pumps for various applications; variety of certified high pressure flexible hoses; large inventory of fluid line components including double regulating valves, non-return valves, strainers and associated equipment; automatic make-up water and chemical treatment systems; in-house fabrication facilities for project-specific installation requirements such as headers, reducers and connection points; remote monitoring options are also available for all temporary chiller installations.

RSS Temporary Power Solutions: includes full range of acoustically containerized generators; distribution boards, change-

over panels and junction boxes; extended range of environmentally safe fuel tanks; high current rating flexible power cables for extreme ambient conditions.

RSS Turnkey Solutions: flexibility, rapid response and understanding the requirements of our customers are successful elements in providing turnkey solutions in power and cooling projects. Customers trust RSS because of our proven ability to provide reliable and realistic solutions for any situation.

RSS in-house engineering and fabrication facility enables us to fully support, manage and operate any temporary cooling and power application.
