Bynari Introduces New NeonInsight Email Server in Beta!

A leading developer of messaging and collaboration software, today announced their server 5.0, neonInsight is in Beta! neonInsight is a Linux based email server that sets very high standards for messaging solutions.

/24-7PressRelease/ - DALLAS, TX, May 11, 2008 - Bynari, Inc., a leading developer of messaging and collaboration software, today announced their server 5.0, neonInsight is in Beta! neonInsight is a Linux based email server that sets very high standards for messaging solutions. Utilizing open standards and a high level of compatibility, neonInsight delivers what companies need for a 24/7 email solution.

NeonInsight was developed from 25 years of experience providing bullet-proof Messaging and Groupware solutions to some of the largest organizations in the world.

NeonInsight is an affordable, easy to manage, email server designed for small to enterprise level customers. It provides a single integrated solution that supports all of the functions that you need. It also provides centralized management to easily administer your email environment. neonInsight allows sharing with Outlook clients and Insight WebClient. In addition, Mozilla s Thunderbird, Novell s Evolution, and iCalendar clients can share calendar and contacts with Outlook.

Some of the advantages of neonInsight are:

- * Directory Independence
- * Single instance storage for significant storage savings (over 50% for some sites)
- * File-system based storage for optimized performance and robustness (no database corruption and backup difficulties)
- * On-the-fly system configuration - no restart needed
- * Email Archiving
- * Migration tools for Exchange and IMAP servers
- * On-the-fly Backup and Restore
- * Application level virtualization
- * Single-Domain/Multiple system mail routing
- * Load Balancing/Redundancy/Scalability
- * Unlimited Virtual Domains

We have completely redefined what an email server should be. Customers can manage their email servers with similar functions that are only available in sophisticated operating systems. Said, Hyun Kim, President, Bynari.
