/24-7PressRelease/ - ANAHEIM, CA, May 15, 2008 - Have you heard the news? Almost every adult body is loaded with toxins. Will our children be far behind? Toxins are in the air we breathe and the food we eat. Scientists and medical professionals are finding out that just by removing toxins, we can get healthy again. There's no quicker way than with a Purus Far Infrared Sauna. With every session, Cedrus' far infrared rays are working on your toxic overload. Toxins are unwanted chemicals that enter your body in countless ways. Some are deliberate, like eating preservatives in our foods or using chemicals on our bodies such as hair spray. Mainly, toxins enter the body through our environment. Ever wonder why there's such a drastic increase in cancer every year? Our bodies are exposed to so many chemicals like cleaning solutions, pollution from automobiles and industry, soaps and hair dyes, food additives, paints, and even chemicals in our carpets. Your sweat from a session in your Cedrus sauna will only contain about 80% to 85% water. The balance is heavy metals like mercury, cadmium and lead... plus cholesterol, excess uric acid and a whole lot of other stuff that is best gone! There are two ways to remove toxins from our bodies. They are filtered through our internal organs such as our kidneys and liver, or we sweat them out through our external and largest organ, the skin. The tuned infrared from a Cedrus Sauna gets into the cells holding these toxins and helps remove them for good! Today, our lifestyle usually doesn't include sweating. Our bodies were designed to use this process to help take the load off of our internal organs. It's no wonder people these days are having more liver and kidney problems. Help out all of your organs by using your Cedrus Sauna. Every day is best, but try to get in at least 3-4 half hour or longer sessions per week.
