Boss Engineering Once Again Selects Quick Connect USA, a Telecommunications and Information Technology Management Company, to Engineer Their Communications Network

Michigan-based Boss Engineering has once again selected Quick Connect USA to engineer their communications network to accommodate their business restructuring. Their goal was to streamline operations and integrate their voice and data needs, resulting in monetary and time savings.

/24-7PressRelease/ - CLARKSTON, MI, June 20, 2008 — Howell, Michigan-based civil engineering firm Boss Engineering, has once again selected Quick Connect USA to re-engineer their communications network. Their objective was to streamline operations while exploring solutions for adding and closing satellite office locations as dictated by client demands. "Dealing with a phone system can be quite cumbersome and difficult to handle. However, without it, we obviously cannot communicate, therefore it is crucial that it works. With Quick, the system operates well and is under their management, allowing us to concentrate on our core business," noted Steve Schippers of Boss Engineering. "We provided a speedy solution, which liberated Boss and allowed them to focus on their business restructuring," said Bruce Yuille, President of Quick Connect USA. Schippers went on to say, "We didn't notice any downtime and the entire process was a seamless transition".

After Boss Engineering decided to solidify its presence and center of operations in Howell and eliminate certain satellite offices, Quick Connect worked to create a network that was able to respond to the new needs of Boss's Howell location, while at the same time allowing for Boss's future growth. Boss also sought a unified solution for voice and data services, reducing the need for equipment upgrades, additional technical support costs, and multiple invoices. As Schippers said, "We just want one bill; with Quick it's the same recurring charge every month. It's like paying rent and really helps my business to manage cash flow. No guessing games are involved".

Boss Engineering Company was founded in 1969 and is a leader in providing high quality civil engineering, land planning, land surveying, and landscape architecture services. Celebrating more than 38 years in business, Boss is the oldest local firm providing such services in Livingston County. They have developed a style of operation that emphasizes a team approach and close involvement by their project managers; clients deal with the same project managers and a hand picked team of in-house experts throughout project involvement.

Quick Connect USA was founded in 2001 in Clarkston, Michigan. They are a full-service telecommunications and information technology management company whose goal is to work with customers to create customized solutions by conducting site surveys and making educated recommendations for products and services required for the best results. As a partner with Cisco Systems and their subsidiary Linksys, they are highly regarded in their field with a mission statement focused around building long term relationships where Quick manages data, network, and voice needs for select customers.
