UK Energy Saving Published in UK Power Magazine

UK Energy Saving publishes article entitled 'Solar - A Look at Business Opportunities'

/24-7PressRelease/ - July 17, 2008 - As a popular consumer resource offering information on energy saving, renewable energy and green living, UK Energy Saving was recently invited to write an article on solar power for UK Power magazine. The editors were looking for an update on solar power and how it might be used to reduce energy bills and improve energy efficiency particularly for businesses. The team at www.uk-energy-saving.com were pleased to agree to this proposition and their article was published in Issue 2 2008 of UK Power.

The UK Energy Saving article was entitled "Solar - A Look at Business Opportunities" and gave an overview of the UK photovoltaic industry today as well as some recent technological developments which could offer more cost effective solutions in the future. As the article pointed out, "solar PV is undeniably an expensive energy solution in the short term, but whilst costly, there are benefits and potential cost savings to be made over time". www.uk-energy-saving.com Web Marketing Director, Hayley Jones, then went on to look at some of the financial savings which could be made by businesses as well as reiterating that the importance of the savings in carbon emissions should not be overlooked.

In concluding, the UK Energy Saving article made the point that energy efficiency is still of vital importance. "Solar PV can decrease or remove completely the dependence of a company on fossil fuel-generated electricity, offering businesses long-term financial and environmental rewards, but this does not negate the need to keep power consumption to a minimum".
