**SMARTREG GUARDIAN**

**THE WORLD'S MOST ADVANCED MOBILE VEHICLE PLATE RECOGNITION SYSTEM FOR POLICE ENFORCEMENT**

*PARKING AND TRAFFIC TECHNOLOGIES, international supplier of ANPR (automatic number plate recognition) systems, today announced the official release of SMARTREG GUARDIAN, the world's most advanced standalone mobile vehicle plate recognition system for police enforcement.*

**/24-7PressRelease/** - DUBLIN, IRELAND, July 18, 2008 - SMARTREG GUARDIAN is a compact, "point and capture", digital camera system designed to automatically read vehicle license plates for intelligence monitoring, surveillance and enforcement. The system permits police enforcement agencies to rapidly deploy vehicle recognition cameras anywhere, anytime without any special setup or configuration requirements!

Traditional license plate recognition systems (ANPR) systems in use today, typically operate from within the police vehicle or from a fixed installation. SMARTREG GUARDIAN's simple "plug and play" design, offers a new level in portability and flexibility not seen before in the industry. Both compact and lightweight, the system is small enough to fit inside a briefcase. SMARTREG GUARDIAN is powered from a compact battery source allowing the system to operate in both urban and rural locations, independent of an existing mains power supply or fixed telecoms. Integrated IR illumination ensures that the system operates both day and night. Vehicle data, recorded by the system, is transmitted wirelessly, either locally, to a mobile display terminal, laptop or handheld device, or remotely, via GPRS, to a regional office for processing. Integrated GPS ensures that all recorded images are geographically tagged to identify the location of the vehicle for evidential purposes.

With multiple systems working together, SMARTREG GUARDIAN can also be used to provide average speed measurements and real-time vehicle statistics.

SMARTREG GUARDIAN is compliant to the UK police NAAS standards.

GRAHAM FOGARTY (MANAGING DIRECTOR): "ANPR continues to provide a very effective policing tool in denying criminals access to the roads. With SMARTREG GUARDIAN, police enforcement and traffic agencies can rapidly deploy systems to a given location and receive real-time information on all vehicle activity instantaneously. Particularly in the run up to the London Olympics, we believe SMARTREG GUARDIAN will play a vital role in crime prevention and the monitoring of criminal activity..

About Parking and traffic technologies

PARKING AND TRAFFIC TECHNOLOGIES specialise in the development, design and manufacture of intelligent systems for vehicle related markets. We provide traffic information, traffic calming and enforcement technologies to the traffic, police and parking authorities. From traffic sensors to back office systems, we provide our customers with a comprehensive end-to-end solution. Through continuous investment in technology and development, we continue to serve both the domestic and international markets.
