**Fast New US-Friendly Casino Software Enables Multitaskers to Play Several Games at Once**

*RomeCasino.com's new tabbed games and blazing fast downloads keep things moving for multi-game players. Since RomeCasino.com is one of the only online casinos to accept all three major credit cards, the cashier is also quick and easy for both American and European players.*

**/24-7PressRelease/** - August 7, 2008 - RomeCasino.com's new US-friendly software now gets players directly to the action quicker and easier than any other online casino. New on demand game downloading is the fastest in the industry, and unique tabbed games mean players can play several games at once and switch instantly from one to another. Since RomeCasino.com is one of the only online casinos to accept all three major credit cards, the cashier is also quick and easy for both American and European players.

RomeCasino.com, popular with European online casino players for some time now, has more than a hundred unique games and state-of-the-art 3D graphics and sound effects. The new US-friendly casino software includes revamped versions of classic and new games including a variety of classic slots, video slots, video poker, roulette, multi-hand blackjack, keno and more.

On demand game loading allows for blazing fast download times and gets players to the action faster than ever. Tests show that RomeCasino.com is the fastest loading next generation platform in existence -- almost twice as fast as Playtech casino games and up to four times faster than Microgaming.

Multi-tasking multi-gamers will enjoy the new tab-based system, which allows players to open multiple games and switch instantly between them. A new totally intuitive menu system gives players the ability to assess their game and become even more involved in the experience. The hassle of switching between play- and real-money accounts has also been alleviated with a one-click transition between the two.

"Players just want to get to the table and play," said RomeCasino.com CEO Josh Cartu. "We've developed a new cutting edge interface that cuts out wasted time searching through menus and sifting through games. I think they're going to like that. And they're going to be amazed at how fast our games download."

An added benefit of having such a stable platform is the increased credit card acceptance rate. RomeCasino.com is one of the only online casinos that accepts deposits through all three major credit cards. Funding accounts is simpler than ever from both sides of the Atlantic. For players that are new to online casino games or who have questions about deposits or withdrawals, 24/7 Instant Chat Support is ready and waiting in the lobby to assist.

To celebrate the release of this US-friendly casino software, Rome Casino is offering a 200% deposit bonus. This bonus turns a \$100 deposit into \$300 for players to wager. To instantly take advantage of this great offer, the software can be downloaded at [www.romecasino.com](http://www.romecasino.com).
