**Amazing Disk Cloning Software released by PC Disk Tools Inc**

*PC Disk Clone is an self-bootable CD application that makes it easy to clone a hard drive or partition within your computer. Systems that were cloned successfully includes all versions of Microsoft Windows, All versions of Linux, Unix, NetBSD, Solaris/x86.*

SYDNEY, AUSTRALIA, October 07, 2008 **/24-7PressRelease/** -- PC Disk Tools Inc has given out a time limited 10% extra Discount on Special Offers: Coupon Code "PCDI-OVTP-NY"

PC Disk Clone (<http://www.pcdisktools.com/pcdiskclone.htm>) is an self-bootable CD application that makes it easy to clone a hard drive or partition within your computer. Systems that were cloned successfully includes all versions of Microsoft Windows, All versions of Linux, Unix, NetBSD, Solaris/x86.

Why PC Disk Clone?

**1. Clone with High Speed**

When you clone a hard disk to another within the computer box, the transfer speed can accelerate to 7GB per minute. You wait much less time than other competitive products.

**2. Clone to Removable Hard Disk**

PC Disk Clone can use a USB or Firewire(IEEE1394) cable to clone to an external drive.

**3. Clone any System on any File System type**

PC Disk Clone is independent of file system formats and operating systems. You can use it to move the whole system including the installed Windows vista/xp/ 2003/2000/ME/98/95, Linux, Unix, NetBSD, Solaris/x86 and applications to new hard drive without having the install them again.

**4. Clone unknown, hidden or proprietary Partition Formats**

Besides the abilities to clone NTFS, FAT, EXT2, EXT3, HFS, XFS, JFS and ZFS Disk Formats, cloning can also be very successful in case of unknow, hidden, or proprietary file systems.

**5. Clone Dual Boot Systems**

PC Disk Clone can copy hard disk with dual bootable systems. For instance, Windows and Linux within one hard disk can start up successfully in the backup disk.

**6. Necessary Tool for Data Rescue**

PC Disk Clone can also be used for data rescue. Because hard disk with defective areas always need to be copied to another disk before any recovery procedure. Otherwise, the recovery may cause further defects resulting from the inherent exposure of the recovery operation. PC Disk Clone reduces the exposure to its minimum due to its sector copy mechanism. (Note: Only Sector copy can be used to recover data from hard drive.)

**7. Best Choice to migrate Systems**

PC Disk Clone is ideal to migrate Windows Systems to new computer with the help of Microsoft Sysprep tool. After a few preparation using sysprep, Migrating Hard Disk Data, as well as eliminating the annoyance of reinstalling Windows and of losing personal information, will become easy and efficient.

**8. Best Choice to Upgrade/Replace Hard Drive**

Upgrading an old disk with new one is almost the same as migrating system to new computer except the new disk drive will still be used in the same computer.

**9. Best Choice For Laptop Installation Backups**

PC Disk Clone provides the possibility to create a local backup of an entire system installation for Laptops. If required, a simple restore from the backup partition brings the system installation back into its original state. Therefore, Laptops can create a partition on the unused disk space as a backup of system. After having installed the system, make a copy of the system drive to the backup drive. Then you can restore the original system partition at any time by copying in the opposite direction.

About PCDiskTools Corporation:

Since 2006, PCDiskTools has been developing and marketing technologically advanced applications for business and home users. Located in Sydney, Australia, the company offers utilities that make Windows computing safer, faster, and more reliable. PCDiskTools understands the needs of computer dealers, VARs, consultants, and network administrators who work with hundreds or thousands of computers.
