SharePoint Lookup Boost, an improvement to SharePoint lookup

SharePoint Lookup Boost can display all details related to a SharePoint item in one page and make it possible for two-way lookup.

BEIJING, CHINA, October 10, 2008 **/24-7PressRelease/** -- SharePoint Lookup Boost has just released. This product is one of the lookup series of SharePointBoost. SharePoint Lookup Boost can display all details related to an item in one list and make it possible for two-way lookup. (<http://www.sharepointboost.com>)

It is the default function of SharePoint to lookup information from different lists in one site. However, due to the single direction of lookup, SharePoint users could only look up information from others, and cannot know when items are looked up by. SharePoint Lookup Boost enables users to be informed as long as the items are looked up by others.

After the release of SharePoint Cross Site Lookup, SharePointBoost develops its brother product: SharePoint Lookup Boost. SharePoint Lookup Boost offers an overview page to list all related information of an item. The page not only displays all items from which this item looks up, but also shows all items which look up information from this item.

Sometimes you might generally need to build a two-way relationship between two items. For instance, A_i looks up information from B_j , and B_j may also need to look up A_i . Such operation, which usually confuses users, is extremely complicated. With SharePoint Lookup Boost, the two-way relationship can be easily demonstrated in a page without creating two-way Lookup columns manually. SharePoint Lookup Boost can search all items related to a specific item and show them categorized by lists, said Henry Zhang, the CTO of Brandysoft.

SharePoint Lookup Boost can be applied together with SharePoint Cross-Site Lookup which enables users to look up information cross sites. With this suite, the user not only can look up information in different sites, but can have a full view to all related information of an item.

SharePointBoost is a software provider dedicated to development and distribution of SharePoint Add-ons and Features. Up to now, companies from more than 20 countries increasingly benefit from SharePointBoost products and services. SharePointBoost add-ons combine flexible and practical together. They greatly improve SharePoint function, and reduce the difficulty of daily operation of SharePoint for IT professionals.
