WirelessTimeClock.com Launches Redesigned Site

Offering cost-effective employee time and attendance solutions, WirelessTimeClock.com improves upon its web shopping experience with a complete overhaul of its site.

   SAN LUIS OBISPO, CA, April 10, 2012 **/24-7PressRelease/** -- WirelessTimeClock.com, a trusted source for web-based time clocks, has re-launched its website (http://www.wirelesstimeclock.com) with a more intuitive and streamlined design, promising a more enriching experience for businesses searching for reliable employee time clocks and time and attendance management solutions.

"Our customers have been asking for a more intuitive, resourceful site," says Scott Tobin, owner of WirelessTimeClock.com. "We wanted to make sure they could find exactly the clocks and monthly plans that would fit their business needs."

With the new website, visitors will see the products and services front and center, with quick descriptions of the employee time clocks, prices and detailed pictures that call out advanced technical features of each time clock. The updated site also offers help pages, an online contact form, and phone customer services support for any questions customers have while shopping.

"Our primary goal is to provide customers with the time and attendance solution that works best for their business and their budget," notes Mr. Tobin. "Providing an easy-to-use site and worry-free customer are essential."

Many customers want to learn more about how the employee time clocks integrate with time tracking software. The redesigned site offers information explaining how WirelessTimeClock.com's web-based time clocks work, including initial setup and time data management in most popular payroll systems.

For those unfamiliar with web-enabled clocks, employees can punch in either through the clock itself, through the clock management website, through a mobile phone app or by phone. Managers then login to the website to view hours, run reports, make any changes and manage the system. That data is immediately available to be exported to payroll or an external payroll company.

The new website also has a dedicated page to special low-cost service plans for purchasing WirelessTimeClock.com's employee time clocks. For businesses with 1-9 active employees, the cost is $18 a month; for 10-19 active employees, the cost is $29 a month; for 20-49 active employees the cost is $49 a month; for 50-99 active employees the cost is $79 a month; and for 100 plus employees the price is $99 a month.

"One of the biggest areas of growth over the past year has been in biometric time clocks," adds Mr. Tobin. "This option ensures that only the employee is punching in and out through the use of a fingerprint reader integrated into the device. Our BN4000 model offers both fingerprint identification and wireless capability, making it the ideal choice for a growing number of businesses."

Like their easy-to-use time clocks, WirelessTimeClock.com's new and improved website will be a snap for visitors to navigate and easily find the right product for them. With honest service, a lifetime replacement policy, and affordable pricing, WirelessTimeClock.com is the go-to destination for all employee time clock needs.

WirelessTimeClock.com (http://www.wirelesstimeclock.com) has provided hundreds of businesses with reliable, low-cost employee attendance solutions. Based in San Luis Obispo, California, the company has served businesses worldwide with web-based time clocks and state-of-the-art biometric time clocks.
