

Techgene Shifts Gears and Takes the IT World by Surprise Unleashing a Unique Data Migrator Tool...

Techgene launches its first product that resolves the data migration crisis. PelicaMigrator is the tool that the world could lay hands on to migrate the data from RDBMS to MongoDB.

IRVING, TX, December 19, 2013 **/24-7PressRelease/** -- The latest news doing rounds in the IT market is about Techgene making an unprecedented move by developing the **first-of-its-kind** data migrator tool, which it labeled as '**PelicaMigrator.**' This tool is being dubbed as 'one-click data migrator tool' that facilitates the migration of data from **RDBMS to MongoDB.**

This development comes in the backdrop of data getting more complex and trickier day by day. Under these circumstances, users find it extremely troublesome to migrate the data from source to destination. During the launch, Kumar Kukunuru, CEO, Techgene Solutions said, "PelicaMigrator provides a unique mechanism by which Enterprises can mitigate the risk in data migration with such ease and incomparable speed thereby ensuring reliability and data integrity across databases which results in significant ROI."

How it functions

Techgene's PelicaMigrator is a very powerful tool used to migrate data from RDBMS to MongoDB. It enables a less constrained mechanism for migrating and retrieving the data using internally built intelligence, thereby ensuring 100% data integrity while maintaining the same set of relationships from RDBMS. Powered by its in-built intelligence, PelicaMigrator supports both simple and complex migrations seamlessly.

On the whole, this tool looks simple and reliable, much to the aid of users having to transfer the complex data in unfavorable conditions.
