New BPH Cause and Treatment Has Been Described in Top Medical Journal Aging Male, Announced Fine Treatment

A new article published in the Aging Male journal shows that clinical investigation on Thermobalancing therapy has discovered the cause of benign prostatic hyperplasia (BPH) and the best way of prostate enlargement treatment.

OXFORD, ENGLAND, December 23, 2016 /24-7PressRelease/ -- Dr Allen's Device that provides Thermobalancing therapy reduces the size of enlarged prostate, eases the passage of semen through the prostate gland, and relieves lower urinary tract symptoms (LUTS) due to prostate enlargement (BPH). The article "Use of thermobalancing therapy in aging male with benign prostatic hyperplasia with a focus on etiology and pathophysiology" published in the top medical journal in December explains the cause of BPH from new point of view, states Fine Treatment.

Prostate enlargement does not have to be dreaded anymore. A 2-year clinical trial shows that enlarged prostate can be reversed non-invasively and safely with Thermobalancing therapy by using Dr Allen's Device. It improves men's quality of life, increases potency and libido. What's more, this therapy has no adverse side effects. Invented by Dr Simon Allen in the United Kingdom, this essentially natural treatment method is backed by in-depth medical research and strict clinical tests.

In fact, Dr Allen's Device was used by men in 100 countries. Men find that wearing this soft belt with a special thermo-element is simple and does not interfere with their daily activities. So it makes perfect sense for men to opt for this gentle treatment option in the first instance.

Most men will get BPH at some point in their life. About 50% of men between the ages of 51 and 60, and up to 90% of men older than 80, suffer from BPH, according to the US National Institutes of Health. BPH is the most common prostate problem. About 14 million men in the USA suffer from lower urinary tract symptoms (LUTS) due to BPH. So it is reasonable for men to prevent enlarged prostate from the age of 45-50.

"BPHE medications should be used only at the acute stage. Long term use of Alpha-blockers, such as Finasteride (Proscar) and Dutasteride (Avodart), may cause side effects, such as impotence, decreased sexual desire and retrograde ejaculation; and testosterone therapy suggested for potency improvement often causes other health problems, including heart attack and stroke," explains Dr Allen. "Addressing these concerns, I designed a therapy that works naturally. Thermobalancing treatment reduces the size of enlarged prostate gradually, improving men's wellbeing."

"Thermobalancing therapy is unique in targeting the BPH cause, focus of hypothermia inside the prostate tissue, by precise local temperature control, which slowly reverses prostate enlargement", explores article in Aging Male journal, https://www.ncbi.nlm.nih.gov/pubmed/27960590. Other non-invasive treatments, including supplements and are unable to stop the process of prostate enlargement. So before the invention of Dr Allen's Device, a surgery used to be the only effective treatment for BPH as it just cuts out the whole prostate gland or a part of it. However, any prostate surgery, even a minimally invasive one, may have inevitable side effects. But Thermobalancing therapy is totally safe.

About Dr Allen and Fine Treatment:
Dr Simon Allen, MD, PhD is a highly experienced medical professional. He specializes in internal medicine and developed thermobalancing therapy, patented by the United States Patent and Trademark Office USPTO: US 9,408,744 B2. Fine Treatment ensures international availability of Dr Allen's Devices for the treatment of chronic prostatitis and enlarged prostate, coronary heart disease, kidney stones, headaches, dizziness, lower back pain and sciatica.
