“It’s a Whirr! It’s a Blur! No, it’s a *Bird - Hummingbird* that is,”

Live from Tugboat Enterprises and Infotec

(Powell River) – FOR IMMEDIATE RELEASE – The energetic group of software developers at Tugboat Enterprises has teamed up with Infotec Business Systems, Inc. from Vancouver, B.C. to take advantage of Infotec's video streaming technology and feature the setting for Tugboat's Software from the Middle of Nowhere. The live video seen through Tugboat's *Window on the Middle of Nowhere*, currently featuring a hummingbird cam, and can be viewed at www.TugboatEnterprises.com.

“We are impressed by Infotec's technology,” said Tyabji Wilson, “and see opportunities for further synergy between our companies. We find it relaxing to watch hummingbirds against the backdrop of the ocean, and we look forward to sharing this with visitors to our website while providing different views through our *Window on the Middle of Nowhere*. There are many software applications for Infotec technology that excite us at Tugboat.”

This video streaming is made possible by Infotec Business Systems, Inc www.infotecbsi.com which through its wholly owned subsidiaries Galaxy Networks Inc., Stream Horizon Studios Ltd. and Ebahn Television Corp., is a leading global provider of video streaming media and digital IP content.

“We welcome opportunities to showcase our technology,” said Arthur Griffiths, CEO of Infotec. “The Eagle Cam on Hornby Island exceeded our expectations in

terms of number of hits per day, climbing to over ten million. Through company cooperation like the *Window on the Middle of Nowhere* both businesses benefit."

Tugboat Enterprises Ltd is a start up software company which first introduced their highly successful *Lifeboat Data Rescue* in 2005 and has followed that with *Nauticus Deep Data Storage*, a fully automated off-site data storage system, and *Coracle*, a data transfer program.

Tugboat Enterprises, which has introduced the acclaimed *Lifeboat Data Rescue* program, offers off-site data storage through *Nauticus Deep Data Storage*, and file transfer through *Coracle*, prides itself in the development of software that is highly reliable and easy for non-technical people to use.

The Window on the Middle of Nowhere can be seen along with *Lifeboat Data Rescue*, *Coracle*, *the Hook*, and *Nauticus* on the Tugboat web page at www.tugboatenterprises.com Industry reviews of Tugboat products are at www.pcnet-online.com/index.html and www.kickstartnews.com/reviews/utilities/nauticus_deep_data_storage_ksn.html

TUCOWS Must Have Applications - Lifeboat by Dr. File Finder™ December 22, 2005

Lifeboat saved me hours of work.... The Lifeboat Data Rescue System is brilliantly simple... Lifeboat can save your files even if the operating system has failed! I haven't seen another program that can make that claim... Lifeboat, by Tugboat Enterprises, Ltd., is in my opinion a program that should be included with every computer... Because you never know what will trigger the crash... Lifeboat ... (has) become what I consider to be a true must have application!

If you don't buy the program now, at least bookmark this page in case you need Lifeboat in the future. The builders of the Titanic said it was unsinkable and didn't install enough lifeboats. They were wrong and it cost the passengers everything. If you have a crash, make sure you have a LifeBoat!
