

WEBRIQ™ provides a dynamic portal engine and content management system that enables anyone to publish their own website, and that from a simple informative website to a complex multisite and multilingual business, community or news portal.

WEBRIQ's SaaS platform is Ajax based, can be used with any browser available on the marketplace and all layouts are created with W3C valid XHTML & CSS, and therefore websites created with the WEBRIQ are complying with the highest security and ergonomic standards.

WEBRIQ complies with the five big demands of a today's software platform:
Mobility, Ease of use, Simplicity, Speed and feature richness.

Unique and innovative features of the platform include:

- drag and drop menu editor
- multisite and multilanguage within the same domain
- interchangeable templates
- customizable designs
- a powerful and advanced word-type editor
- multiple site administrators
- user security through registration
- and a state-of-the-art video gallery or blog embedded on your site and with an own video player

Beyond that, one can include and manage blogs, articles, news, banners, logos, links, widgets, event calendars, voting modules, webshops and image galleries from the same integrated platform.

The niches that are well developed within the engine are the video blog feature and the sports features.

WEBRIQ™ offers four different service packages, starting from a Basic service all the way up to a Gold service, for those users who want to build and operate different content within the same domain name or the same content in different languages also within the same domain name. We currently offer an interface in six different languages namely English, Spanish, French, German, Dutch and Hungarian and we will continue to build additional language interfaces in the near future.

Users can sign-up for a 30 day FREE trial on any of the packages available and are able to use the entire functionality of the platform during the trial period. Within that trial period, users can convert at any time to one of the free or to one of the commercial services available. At the end of the trial period, users will be automatically converted to one of our FREE services.

Beyond a traditional affiliated program that is on offer, WEBRIQ designed a webmaster referral program called [SWITCHTOWEBRIQ](#).

The program is specially designed for webmasters or web agencies that have the capability to promote our portal engine and content management system under their own label or the switchtowebriq logo. A complete management interface has been developed for our partners in order for them to manage their entire customer base with the WEBRIQ engine.
