

Intranet Connections Embraces Enterprise Video Sharing

July 30, 2009 – Vancouver, BC

Intranet Connections Intranet Software will be including video capabilities in the upcoming fall release of its popular intranet software suite. Version 9.5 will provide enterprise users the ability to easily embed web-formatted media files within intranet content. Media files can be uploaded and embedded directly through the intranet HTML editor. Both video and audio podcasts will stream directly through the site without the need for users to download large video files.

With an increasing number of companies choosing to create vlogs (video blogs), training clips, and answer how-to questions in video, Intranet Connections wanted to provide a simple and easy solution for employees to quickly embed videos with their intranet content. Intranet collaboration can be enhanced by offering webinars, product launch details, and employee feature spots in video format instead of traditional PDF, Word and PowerPoint documents.

Carolyn Douglas, CEO of Intranet Connections comments that “in today’s culture of instant gratification, people are looking for immediate, bite-sized pieces of information. Videos are a great way to enhance knowledge sharing. The new Intranet Connections media embedding feature provides users, with no experience, with the ability to easily upload a video or audio file to the intranet, and we take care of the rest. Employees can embed video or audio files anywhere on the intranet and are not restricted to a specific video-based application.”

[Intranet Connections Intranet Software](#) is a feature-rich, out-of-the-box intranet solution with content and document management that focuses on ease of use, collaboration and employee ownership. Over 1300 organizations world-wide have chosen Intranet Connections to improve their employee communications, centralize their corporate information, save costs and increase productivity.
