

You have an existing Template design for your website, or you just created a Photoshop design for your new website or you choose one of the many free or premium Templates to build your new website.

You want to be live quickly and you want to start adding new and existing content in to your website.

WebriQ has something that can guarantee you a quick turnaround on the implementation of your design and convert this in to a neat design with a powerful content management system underneath it to build and manage your entire web content, including an E-commerce module.

Here is how it works:

- you send us your PSD File or your sample Template
- we convert this to a CSS/HTML WebriQ compatible Template within 3 Business days.
- the Template is uploaded to a URL of your choice, i.e. Sample.webriq.com
- You can use our content management system 30 days Free of charge and you get access to all our modules
- within the 30 days, you can activate your WebriQ service in the My Account section
- If you choose our Pro Package, you can freely download the created Template, change it and upload it again in our content management system
- We will redirect your existing URL to the newly created WebriQ URL.

You can find some samples on WebriQ Custom templates under:

- <http://simjen.com>
