

AudioSnaps, pictures with sound in a single JPEG

The app that will change photography is now available on the Apple App Store and Google Play for Android devices

For immediate release: October 16th 2013

Barcelona, Spain- available today on the App Store and Google Play for Android devices, **AudioSnaps** is an app used for capturing pictures with a 5 second audio clip. By creating a new way of understanding and sharing pictures and with the patent pending in the US, the app is able to store 5 seconds of audio on a single JPEG file without the need of any plugin or update, making it visible and shareable on every device and browser.

Used as an app, a photo format and a social network itself, AudioSnaps has already reached **more than 20,000 users worldwide** and it continues to increase thanks to the launch of its Android version.

Totally free and already available for iPhone and Android, AudioSnaps uses this audio clip to get more vivid memories of the captured moments, with the same effort put in taking a regular picture, and it's also **compatible with 'Sound & Shot'**, helping Samsung Galaxy S4 users to share online their pictures with sound.

Supported by the Wayra program (a start-up accelerator project fostered by Spanish leading telecommunication company Telefónica), AudioSnaps has just become one of the selected companies that will take part this year on the **Global Demo Day**, an event in which the best entrepreneur talent from Europe, Silicon Valley and Latin America will be presented.

About AudioSnaps

AudioSnaps takes pictures with sound and stores everything in a single JPEG. Just by recording spontaneously 5 seconds of sound while you take your picture, AudioSnaps captures your best moments. Share them in Facebook, Twitter or any website.

Use it like any photography application. It's this easy. No extra clicks, no complex processes. Just take pictures, the app takes care of the rest.

Features:

- Share the resulting images + sound in any website from www.audiosnaps.com
- See who liked your pictures in Facebook, Twitter and AudioSnaps
- Tag your Twitter and Facebook friends in AudioSnaps. More services to come.
